PRE-INSULATED DUCT SYSTEM

The Huya panel incorporates Polyisocyanurate (PIR) closed-cell foam, with embossed aluminum facing on both sides. Applying precise procedures to manufacture the panel makes it possible to carry out ductwork of any shape and dimensions according to the standards of American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE).
INTRODUCTION

Pre-Insulated Duct Factory is a pioneer in pre-insulated foam ducting. It is the first company in the Kingdom of Saudi Arabia to introduce the innovative and revolutionary foam based pre-insulated ductwork as the new generation material that replaces traditional sheet metal in ductwork.

Thanks to the special technical and structural characteristics, panel ductwork can be used in any project typology: offices, industries, commercial centers, airports, hospitals, clean rooms, laboratories, public buildings, hotels, quarantine rooms, isolation rooms, etc.

In addition to the panel, offers a complete set of tools and accessories that allow ductwork to satisfy any project and installation requirement as well as thermal insulation panels for roof insulation, wall insulation, floor insulation and false ceiling with different sorts of facing like Kraft Paper, Asphalt Paper and Glass Fleece.

Approved by:
Sandwich panels with external aluminum sheet covering a closed-cell insulating material.

+ **Equipment**

Automatic machinery and manual working tools specially designed to realize in a simple and professional way, both in a completely equipped workshop and directly at the job site, all the manufacturing and installation operation required by ductwork (plotting, cutting, bending, gluing, duct closing, section bar application, and installation).

+ **Accessories**

Flange, section bar, and accessories for duct joining and installation.

+ **know How**

Technical and commercial support for consultants and contractors.

= **Huya Duct System**

A professionally designed and constructed duct system as diagramed below.
PUR/PUR foam panel with 45 Kg/m$^3$ density, 20 mm thickness, coated on both sides with 60 micron aluminum foil for Indoor Application.

PUR/PUR Foam Panel with 40 Kg/m$^3$ density, 50 mm thickness, coated on both sides with Asphalt/Kraft Paper. It can be easily and effectively applied to the insides of roofs and walls as well as for floor insulation. The seamless foam layer follows all the contours of the surface and sticks to all kinds of materials and surfaces. PIR insulation protects against cold, heat, damp and draughts. It is the perfect insulation.

Product Code: P-2B50 (for Asphalt) and P-2C50 (for Kraft paper)
Thermal Insulation Panel
STRENGTHS OF PRE-INSULATED DUCT SYSTEMS

1. **Thermal insulation:**
   Constant and continuous in all duct sections. Special closed-cell insulation guarantees low thermal conductivity and limits the risk of condensation.

2. **Friction loss:**
   The low number of flanges and limited surface roughness keep linear friction losses at very low levels.

3. **Airtight seal:**
   Airtightness of Huya ducts is eight times more than traditional ducts.

4. **Energy saving:**
   Excellent thermal insulation and optimum airtight seal allow for maximum exploitation of air handling unit capacity, increasing efficiency and reducing operating costs.

5. **Hygiene and air quality:**
   Using aluminum for duct’s internal surface ensures hygiene and cleanliness. The problem of aging of the insulation and consequent release of particles is nonexistent.

6. **Safety:**
   Huya ducts have a high resistance to fire, do not drop and smoke has a reduced opacity and toxicity. Huya conforms to the requirements of the most restrictive international regulations.

7. **Light weight:**
   The significantly light weight of Huya panels allows a reduction of weight on the structures, supporting points, workmanship costs and materials necessary for the installation.

8. **Silent operations:**
   The sandwich structure (aluminum – insulating material – aluminum) guarantees a good acoustic behavior. Vibration and reverberation are prevented by the insulating material, contributing to a higher comfort in the environment where Huya is installed.

9. **Duration:**
   The outer aluminum coating coupled with the insulating material provides sturdiness, rigidity and good resistance to corrosion, erosion and deformation even in special applications.

10. **Construction easiness:**
    Possibility of manufacturing ducts in the workshop or directly at jobsite with considerable advantages on transportation costs.
CONSTRUCTION OF AIR DUCT

1. **Plotting**
   In this phase, the perimeter of the single piece, that will compose the finished duct (linear or fitting) after cutting and assembly, is plotted on the panel.

2. **Cutting**
   Using the appropriate tools (manual or automatic) in this phase, the single pieces to be used in the fabrication of the duct are cut from the panel.

3. **Bending**
   In this phase (required only for the production of duct fittings), indentations are applied to the piece of panel allowing the panel to be adapted to the shapes of the finished duct.

4. **Gluing**
   During gluing, all the pieces produced above are assembled with the use of special glues and the finished duct takes shape.

5. **Closing**
   In this phase, the duct is trimmed and finished through pressing and taping.

6. **Accessories Application**
   Using specific tools and glues, the section bars required are applied to the finished duct. When the duct is installed, these section bars permit easy connection of the single pieces to complete the air distribution system.
COMPLETE TOOLBOX
Quick access to all your tools is essential if you want to work quickly with precision. Our toolbox provides you with a professional portable work bench. The interior created through special thermoforming provides handy storage of all your fabrication tools like jack planes and the tool slide cartridge-holder on one side and complementary tools like folding rulers on the other.

BENDING MACHINE
This steel bending machine is suitable for easy and precise panel bending. An eccentric cam lever system facilitates the bending of both 20 mm and 30 mm thick panels up to 1200 mm wide with any curvature angle. Compact dimensions and weight facilitate storage and transport.

CUTTING MACHINE
Machine for cutting aluminum and plastic section bars.
Invisible flange joint - Aluminum 20 mm

This special patented aluminum flange joins 20 mm ducts with extremely low leakage. The bars are supplied in 4 meter lengths.

Invisible flange joint - polymer 20 mm

This special patented polymer flange joins 20 mm ducts with extremely low leakage. The bars are supplied in 4 meter lengths.

H polymer bayonet

Built-in shock-resistant polymer, this piece connects invisible flanges. Supplied in 2 meter rods.

Zinc-coated steel angle bracket 20/30 mm

1.5 mm thick zinc-coated steel angle bracket.

Invisible flange joint - Aluminum 30 mm

This special patented aluminum flange joins 30 mm ducts with extremely low leakage. The bars are supplied in 4 meter lengths.

Invisible flange joint - polymer 30 mm

This special patented polymer flange joins 30 mm ducts with extremely low leakage. The bars are supplied in 4 meter lengths.

Tee connector flange joint 20/30 mm.

This patented flange permits the flanging of one duct into the side of another take-offs as tap-in or plenum chamber. The bars are supplied in 4 meter length.

Covering angle 20/30 mm.

Grey polymer covering angle.
CERTIFICATES

Warrington Fire Certificates, United Kingdom:
   - Fire Propagation Index, i = 8.3
   - Spread of Flame at 1.5 min < 50 mm
3. Class “O” Summary Report (For BS 476 Part 6 & Part 7)

For flaming mode:
1. HCN: 4 ppm
2. CO: 150 ppm
3. NO-NO₂: 15 ppm
4. SO₂+H₂S: Not Detected
5. HF: Not Detected
6. HCL: 6 ppm

Dubai Central Laboratory:
1. Compressive strength of rigid cellular plastics: ASTM D 1621:00
   - 106.6 kPa
2. Apparent density of rigid cellular plastics
   - 45.1 kg/m³
3. Flexural strength of thermal insulation
   - ASTM C 203:05a
   - 712 kPa
4. Thermal transmission properties by heat flow meter ASTM C 518:2010
   - 0.021 W/m °K
5. Water absorption test (Thermal Insulation)
   - ASTM C 209:07a
   - 0.32 vol % after 96 hrs
   - ASTM E 96-00
   - 0 grains/h ft²
7. Dimensional stability under constant normal laboratory conditions: BS EN 1603: 1997
   - 0 % Mean dimensional change in Length & Width
